

Huhtamaki Delta recently took delivery of our new purpose built compactor bins and RoRo (Roll ON/Roll Off) skips. Huhtamaki Paper Recycling recently assumed direct control for Delta's recyclate waste management. In order to do so, Huhtamaki Paper Recycling has invested in 6 brand new compactor skips and 6 brand new open top skips. This allows all facets of the Huhtamaki operations to be contained within a closed loop. Delta's waste is transported and processed by Huhtamaki Paper Recycling before ending up in new moulded fibre products at Huhtamaki's paper mill in Dollingstown, Co. Armagh. This allows for all Huhtamaki Delta scanboard waste to be recycled within 20 miles of its origin. This ensures the lowest carbon footprint possible which adheres to Huhtamaki's ethos of local collection and local end processing.
